
REVOLUTIONIZING THE POWER OF CHATBOTS WITH

SHANNON AI

Ecommerce Inventor

ABOUT SHANNON AI

Shannon revolutionizes customer service by minimizing human intervention. Traditional AI chatbots were costly, limiting accessibility for small and medium-sized businesses. Sujal, a computer science graduate and data science expert, teamed up with Pranjal Sharma, an experienced customer service and market research professional, to create Shannon. This next-generation AI chatbot offers a cost-effective solution that enhances customer interactions across industries.

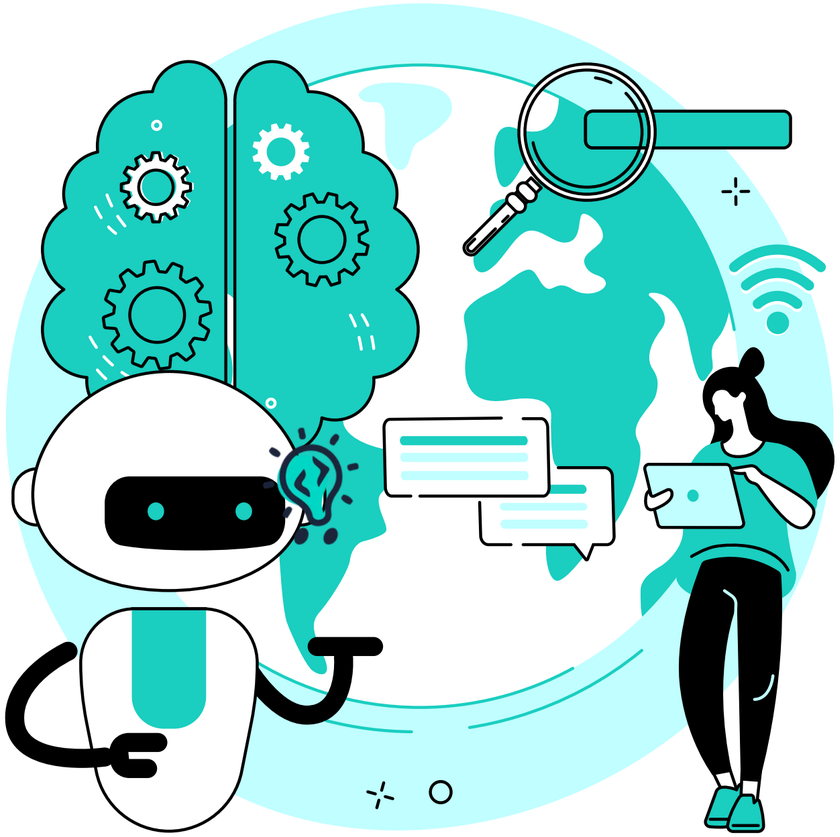
SHANNON AI TECH STACK



Natural Language Processing (NLP):

Core to Shannon's functionality, NLP allows the AI to understand and respond to customer queries in natural language.

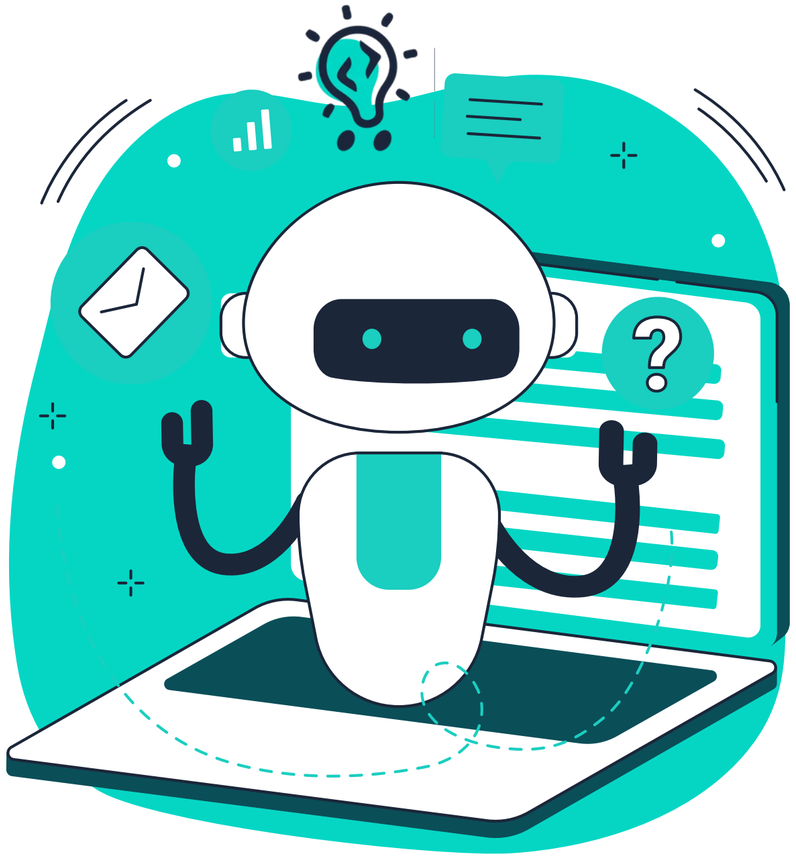
Machine Learning (ML):

Shannon's AI model is trained on various data sources, including website content, FAQs, and customer interactions. This enables it to learn and improve its ability to answer questions accurately over time.

Deep Learning:

For more complex use cases, Shannon might utilize deep learning techniques to enhance its understanding of customer intent and provide more nuanced responses.

SHANNON AI TECH STACK



Vector Database:

Shannon employs a vector database to store and retrieve information efficiently. This allows for faster response times and more reliable information retrieval compared to traditional databases.

Multi-Platform Integrations:

Shannon offers integration with various platforms like WhatsApp, WordPress, and Shopify. This allows for seamless deployment of the chatbot across different channels where customers interact with your business.
